Summary

Fourth-year Computer Science student with a systems-level engineering stack spanning Swift, Rust, and Python. Experience includes shipping iOS applications with live backends and interning on a B2B iOS product in an Agile/Scrum environment. Focused on on-device AI, embedded systems, and building deep-tech solutions for India-specific infrastructure problems.

Education

Galgotias University <i>B.Tech, Computer Science</i> ◦ CGPA: 8.72 / 10.0	<i>Sept 2023 – Aug 2027</i>
Class XII, CBSE ◦ Score: 80%	<i>2022</i>
Class X, CBSE ◦ Score: 86.4%	<i>2020</i>

Skills

Languages: Python, Java, Rust

Frameworks & Platforms: SwiftUI, Xcode, Supabase, Vosk

Tools: Git, Linux, Figma, Android Studio, VS Code, Jira, RaspberryPi, Node MCU

Competitive Programming: 650+ problems solved, 1650+ contest rating [LeetCode](#) 

Projects

CosmicLang ◦ Designed and implemented a custom programming language from scratch to explore and demonstrate core compiler design principles end to end. ◦ Built a lexer to tokenize source input, a parser to construct an abstract syntax tree, and a tree-walking interpreter to evaluate expressions and control flow. ◦ Handled variable bindings, arithmetic and logical operations, and error reporting, resulting in a working language capable of running non-trivial scripts. ◦ Tools Used: Rust	CosmicLang 
Stardust ◦ Built a voice-activated desk assistant on a Raspberry Pi 4, running a locally-hosted LLM (Qwen 0.5B via llama.cpp) with automatic fallback to a cloud API depending on network availability. ◦ Implemented hybrid online/offline speech recognition with grammar-constrained wake-word detection for reliable hands-free activation without an internet connection. ◦ Designed a reactive interface layer: an animated OLED display with state-driven expressions, an RGB LED synced to assistant state, and a live audio-reactive music visualizer. ◦ Tools Used: Python, llama.cpp, Vosk, SQLite, gpiozero	Stardust 

Experience

iOS Development Intern <i>Infosys, Mysore</i> ◦ Worked as an iOS Development Intern on a B2B product, building and maintaining features using Swift, SwiftUI, and other Apple technologies. ◦ Operated within an Agile/Scrum team, participating in sprint planning, stand-ups, and reviews, and tracking work through Jira. ◦ Collaborated with cross-functional team members to translate client requirements into functioning iOS features.	<i>2025</i> Certificate
